

ABSTRACT OF THE DISCLOSURE

The invention provides novel β -lactamase inhibitors, which are structurally unrelated to the natural product and semi-synthetic β -lactamase inhibitors presently available, and which do not possess a β -lactam pharmacophore. These new inhibitors
5 are fully synthetic, allowing ready access to a wide variety of structurally related analogs. Certain embodiments of these new inhibitors also bind bacterial DD-peptidases, thus potentially acting both as β -lactamase inhibitors and as antibiotics.
